

## Gulf of Mexico Harmful Algal Bloom Bulletin

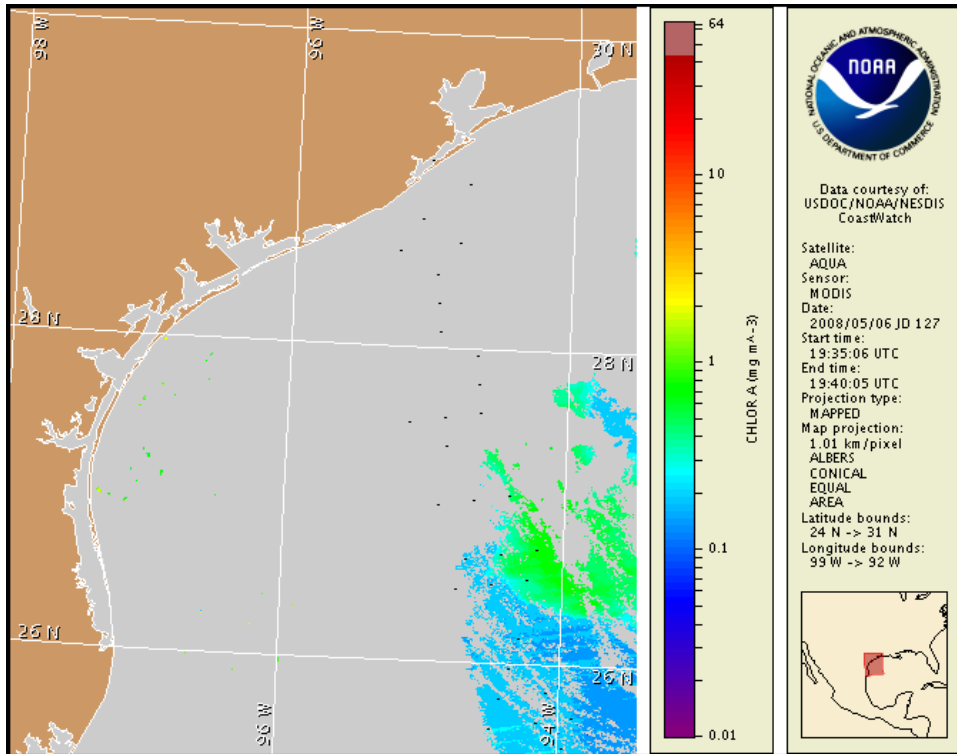

Region: Texas

7 May 2008

NOAA Ocean Service

NOAA Satellites and Information Service

Last bulletin: April 30, 2008

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from April 28 to May 6 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HABFS bulletin guide:

[http://www.csc.noaa.gov/crs/habf/habfs\\_bulletin\\_guide.pdf](http://www.csc.noaa.gov/crs/habf/habfs_bulletin_guide.pdf)

Please note the following restrictions on all SeaWiFS imagery derived from CoastWatch.

1. Data are restricted to civil marine applications only; i.e. federal, state, and local government use/distribution is permitted.
2. Image products may be published in newspapers. Any other publishing arrangements must receive GeoEye approval via the CoastWatch Program.

## Conditions Report

There are no reports of harmful algae at this time. No impacts are expected.

## Analysis

Cloudy imagery over the past week prevents an analysis, however, there have been no reports of harmful algae over the past week. Strong southerly winds through the weekend may produce resuspension and discolored water that are not related to harmful algae.

-Tomlinson

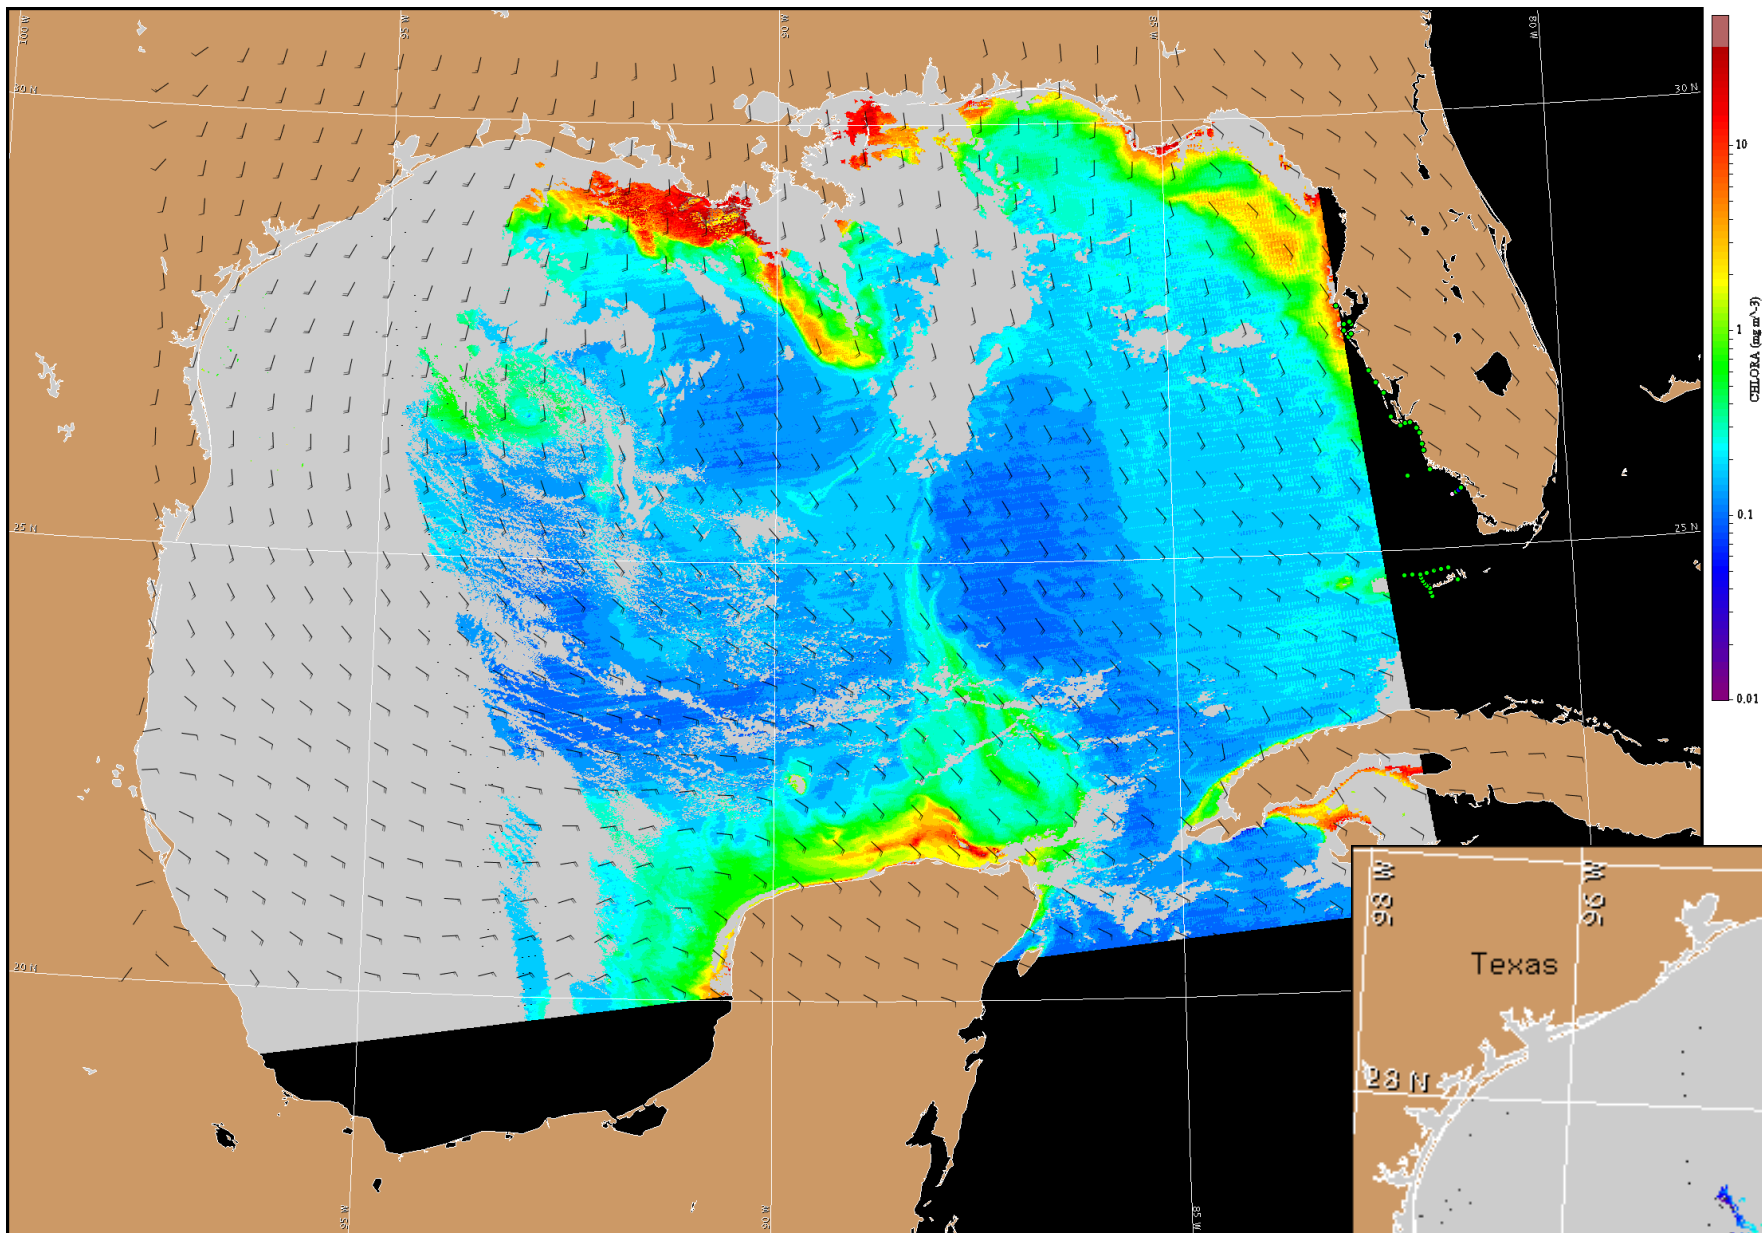

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts.

## Wind Analysis

Strong (20-25 knots) southerly winds will continue today, changing to southwesterly winds through Thursday, and southerly through the weekend.

To see previous bulletins and forecasts for other Harmful Algal Bloom Bulletin regions, visit the NOAA CoastWatch bulletin archive: [http://coastwatch.noaa.gov/hab/bulletins\\_ns.htm](http://coastwatch.noaa.gov/hab/bulletins_ns.htm)

Satellite chlorophyll image and forecast winds for May 8, 2008 06Z with Cell concentration sampling data from April 28 to May 6 shown as red (high), orange (medium), yellow (low b), brown (low a), blue(very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HABFS bulletin guide: [http://www.csc.noaa.gov/crs/habf/habfs\\_bulletin\\_guide.pdf](http://www.csc.noaa.gov/crs/habf/habfs_bulletin_guide.pdf)

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
